

JavaScript Practice Set: map(), filter(), reduce()

map() Practice Set

- Q1: Double [2,4,6,8,10] -> [4,8,12,16,20]
- Q2: Convert ['apple','banana','mango','orange'] to uppercase.
- Q3: Extract names from user objects.
- Q4: Add 18% GST to prices [100,250,500] -> [118,295,590].
- Q5: Add passed:true property to each student object.

filter() Practice Set

- Q1: Filter even numbers from [1..10].
- Q2: Filter words with length > 3.
- Q3: Filter adults (age >=18) from people array.
- Q4: Filter positive numbers from [-10,5,-3,8,0,15].
- Q5: Filter products with price >1000.

reduce() Practice Set

- Q1: Sum [10,20,30,40,50].
- Q2: Product [2,3,4].
- Q3: Find maximum in [25,8,99,34,67].
- Q4: Find total cart price.
- Q5: Count occurrences of ['apple','banana','apple','orange','banana','apple'].

Bonus Challenges

1. Filter passing students, map names, reduce to count passed.
2. Filter delivered orders, map prices, reduce total delivered amount.
3. Filter IT employees, increase salary by 10%, reduce total updated salary.
